

## Truck Entering Highway Hazard Solution

**Do you have large slow moving trucks which regularly need to enter a busy road?**  
**Have you had incidents where vehicles have had to brake hard to avoid a collision with a truck leaving your premises?**

**Have you previously had an accident involving a truck and car?**

Aldridge can assist you with the mitigation of risk to the company, truck driver and the motorist by providing advanced warning of a truck entering onto the road utilising enhanced signage.

Enhanced signage has a proven track record to in highlight key hazards like these.

The signs remain in standby mode until a truck passes over inductive loops installed in the driveway access to the road, which then wirelessly activates the beacons on the static signs installed at a suitable location down the road. By utilising this approach, the warning becomes relevant when it needs to be therefore the sign and flashing beacons do not become wallpaper to the approaching drivers and draws their attention to the sign and the potential hazard ahead when it counts.

### features

- Customisable to truck size
- Directional so only trucks entering road trigger the signs
- Adjustable sign activation period
- AS-2144 compliant Amber LED beacons
- Australian compliant RF wireless activation
- Solar and mains power options
- Durable construction
