

LED FLOOD ZONE WARNING SIGNS

LED Flood Zone Warning Signs

LED Flood Zone Warning Signs offer a much more advanced warning system easily seen by approaching drivers. These signs have a proven track record of being much more effective than a static sign alone. These signs are also only active when required. Low light conditions during storm conditions make these signs stand out even more than a static sign. They can stand alone or paired in conjunction with a static sign offering further information for motorists if required.

We work with you to design the sign to your requirements and ensure it operates at maximum efficiency and reliability plus complies with relevant Australian standards. We come to site to commission the sign and as always offer full technical support following installation.

FEATURES & BENEFITS

- Durable stainless steel enclosures with powder coated finish
- IP65 rated cabinets
- Reliable bright LED matrix panels with automatic brightness adjustment or manual adjustment
- Flashing red annulus section for additional standout enhancements for motorists
- NATA tested and approved LED matrix and annulus panels for reliability and efficiency
- Large swing handle cabinet handles with half-Euro barrels for additional security
- STREAMS compatible ideally suited for Government projects
- Fully autonomous with superior solar panel/battery power combination including solar regulator to regulate battery output
- No maintenance Gel batteries
- Australian compliant road signs

LED Flood Zone Warning Signs

FLOOD ZONE WARNING SIGN RANGE

TC2207 Warning Sign

This LED sign is used in advance of an intersection or crossroad to warn of a road closure on the side of the road. The sign remains blank when no flood warning is required. The top matrix panel containing the street name is amended to suit the point of installation. Contains white LEDs for the top matrix panel and amber LEDs for the two bottom matrix panels.

- We also offer full installation & maintenance

LED Flood Zone Warning Signs

FLOOD ZONE WARNING SIGN RANGE

TC2204_1 Warning Sign

This LED sign may be used in conjunction with static sign G9-21-1 to indicate the road ahead is closed due to flooding. The **ROAD CLOSED** and **NO ENTRY** messages must be displayed simultaneously. Inner rings of the red annulus must be capable of flashing separately in accordance with operating instructions.

TC2260_2 Warning Sign

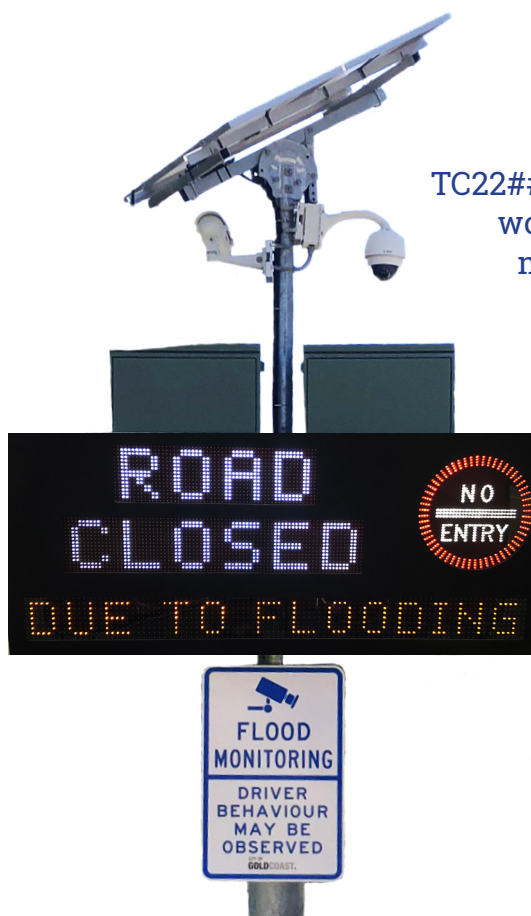

This LED sign may be used to indicate the road is closed due to flooding. The **ROAD CLOSED / NO ENTRY** message must be displayed simultaneously. The inner rings of the red annulus section must be capable of flashing separately in accordance with operating instructions.

LED Flood Zone Warning Signs

TC2206_3 Warning Sign

This LED sign may be used to warn of a road closure ahead at a distance due to flooding. The message is only displayed whilst the road ahead is closed. The numeral in front of 'km' is variable.

TC22## Flood Zone Signs can also work in conjunction with monitoring equipment
